OS/2 Warp Server for e-business

IBM

Keyboards and Codepages

OS/2 Warp Server for e-business

Keyboards and Codepages

First Edition

This edition applies to the first version of OS/2 Warp Server for e-business and to all subsequent releases and modifications until otherwise indicated in new editions.

Contents

About this book

This book contains information about:

* Keyboard layouts
* Codepage tables

Who should read this book

This book is for OS/2 Warp Server for e-business users who need help in identifying which keyboard layouts and codepages produce the characters they want to use.

Note: All OS/2 Warp products will be collectively referred to as OS/2 in this book unless otherwise noted.

Conventions used in this book

This information uses the following typographical conventions:

italics Indicates special terms. For example, The *non-escaping key* is represented by a shaded square on the keyboard.

bold Used to specify a command. For example, press the **shift+character** to display upper cases.

`monospace`
Used to show system output. For example, the character X is displayed when you press the shift+character.

Chapter 1. About keys and keyboards

The layout of a keyboard determines the characters produced when you press the keyboard keys.

Table 1 on page 3 contains information about which keyboards are supported.

The keyboard layouts displayed in this book are for 101, 102, 104, 105, and 106-key enhanced keyboards. The position of keys might vary somewhat on other keyboards.

Non-Escaping characters (Dead keys)

Keys with a gray square under the character represent a dead key or a *non-escaping key*. Use the Dead Keys to form composite characters. For example, to produce é on a Brazil BR275 keyboard, type the accent ´ key, then type the letter **e** key. In many cases, there is no output from pressing just the dead key.

More than one character on a keytop

You can use key combinations to produce a character.

Each key can produce up to four characters, but some of the characters require that you press a combination of two keys. For example, to produce the $ character on a US103 keyboard, **hold down the shift key** while **pressing the 4 key**.

The upper-right character is used only by the Japanese JP194 and the Russian keyboards, RU441 and RU443. The key combinations are customized for each keyboard:

- **AltGr+character key** for the Russian keyboards
- **Hiragana+character key** for the Japanese Keyboard

To produce the lower-left character, **press the character key**. You do not need to press a combination of keys.

To produce the upper-left character, **hold down the shift key** and **press the character key**.

To produce the lower-right character, **hold down the AltGr** and **press the character key**.

Changing the default keyboard

When you install OS/2 Warp Server for e-business, the keyboard is selected early in the install. The default selection is based on the keyboard selected in the config.sys on the install diskettes..

Some countries have more than one keyboard. For example, Italy has two keyboards. Italy IT indicates the default layout; Italy extended IT142 is the alternative layout. Alternative keyboard codes are listed in Table 1 on page 3.

Chapter 3. Keyboard layouts

This chapter contains graphic representations of keyboard layouts. You can use the layouts to determine which keys on your keyboard you should use to produce the characters of another country's keyboard.

Chapter 4. Codepages

Every country and language supported by your operating system has a locale and country code.

For each country code, the operating system provides a primary codepage and some have one or more secondary codepages. The codepages determine how characters are encoded.

The codepage tables that follow contain the hexadecimal values (numbers) for each alphanumeric and graphic character that can be produced with each codepage.

Each codepage has a layout consisting of a grid of characters that can be produced using that particular codepage. This grid is used to determine the hexadecimal value that represents the corresponding character on the codepage.

To find the hexadecimal value, use the row along the left side and the column across the top of the codepage. The first digit of the hexadecimal value is the row number and the second digit is the column number. For example, in codepage 850, the character K has the hexadecimal value of 4B.

To display the characters of the codepage, use the decimal value of the hexadecimal number. Refer to Table 2 to convert a hexadecimal value to decimal. For example, the hexadecimal value for character K in codepage 850 is 4B. To find the decimal equivalent of 4B, find row 4 along the left side of the chart, then follow it across until you reach column B. The cell where row 4 and column B meet contains the number 75, which is the decimal value of 4B.

Table 2. Hexadecimal-to-Decimal Conversion Table

	0	1	2	3	4	5	6	7	8	9	A	B	C	D	E	F
0	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

D	208	209	210	211	212	213	214	215	216	217	218	219	220	221	222	223
E	224	225	226	227	228	229	230	231	232	233	234	235	236	237	238	239
F	240	241	242	243	244	245	246	247	248	249	250	251	252	253	254	255

To display the character K using codepage 850:

1. Press the Num Lock key to activate the numeric keypad on the keyboard.

2. Press and hold the Alt key.

3. Press and release the 7 key.

4. Press and release the 5 key.

5. Release the Alt key.

The K character is displayed. You can press and release the Num Lock key if you do not want the keyboard to remain in Num Lock mode.

Setting the Locale

A system locale defines a user's environment. The locale specifies how the system handles formatting, conversion, sorting, and text processing procedures.

When you install OS/2 Warp Server for e-business, the SET LANG and CODEPAGE statements are created in the CONFIG.SYS file. For example, if the United States country code 001 was specified when OS/2 was installed, the CONFIG.SYS file would contain the following statements:

```
set lang=en_us
codepage=850
```

You can change the system locale by changing the SET LANG statement in the CONFIG.SYS file. For example, to change the locale of the above example to the locale of Great Britain, edit the SET LANG statement to read:

```
set lang=en_GB
```

Existing applications that use the COUNTRY command are also supported.

Changing Codepages

The codepages that the system uses is controlled by the CODEPAGE statement in the CONFIG.SYS file. This statement, along with the SET LANG statement, determines which codepages (primary and secondary) are permanently or temporarily in use by your system.

You can temporarily change to an alternate codepage by using the CHCP command from an OS/2 command prompt.

For example, to switch from codepage 850 to 1004 for the current session, type the following at an OS/2 command prompt:

```
chcp 1004
```

If you want to permanently change your default codepage, you can change the CODEPAGE statement in your CONFIG.SYS file.

Whenever you change your default codepage, you must restart your system for the change to become effective. Use the shutdown procedure to restart your system.

Table 7 on page 36 lists the codepages for the various countries and languages.

For more information about the SET LANG, CODEPAGE, COUNTRY, and CHCP commands, see the online Command Reference.

Codepages

All codepages listed in Table 3 can be used as converters in the Unicode system. The codepages marked in the table can be used as process codepages and Presentation Manager codepages.

A codepage can be used as a process codepage only if it matches the selected country as specified in the COUNTRY.SYS file. See Table 7 on page 36.

You may not have all of these codepages installed on your workstation. In particular, some of the DBCS codepages are only available on DBCS systems.

These are the commonly used codepages in OS/2.

Codepages are supported in base OS/2, Presentation Manager and Unicode conversions. All codepages supported by the base are supported by Presentation Manager, and all codepages supported by Presentation Manager are supported in Unicode.

Base OS/2 supports PC ASCII codepages. Presentation Manager adds support for ISO, Windows, and EBCDIC codepages. Unicode adds support for codepages which are used only for data conversion.

East Asian codepages are mixed single byte/double byte where the first character defines if there is an additional byte. There are also codepages defined for the individual single byte codepage and double byte codepages. These can also be used as PM and Unicode codepages.

OS/2 codepage numbers normally match the IBM Coded Character Set IDs (CCSID). In a few cases, OS/2 has retained the original codepage number of the original definition to minimize changes to applications.

1386	China GBK (1114+1385)	X	X	X	

Notes:

1. The IBM registered codepage number was changed because one or more characters were removed when the Euro sign was added. OS/2 uses the original codepage number.

2. The EBCDIC codepages containing the Euro are the same as the previous CECP codepages except that the International Currency Symbol was replaced by the Euro Sign. Both the old and the new codepage are available to Presentation Manager programs.

OS/2 Warp Unicode Codepages

Codepage 1200 is Unicode UCS-2. This is a two byte little endian representation of the unicode character set. This is the form of Unicode used for internal processing, but it cannot be used in many cases since it includes embedded zero bytes which are often treated as end of string marks.

Codepage 1208 is Unicode UTF-8. This is a one to three byte standard interchange format. This can be used when null terminated strings are required, but it cannot be handled by code which does not accept three byte characters.

Codepage 1207 is an internal unicode representation which encodes all of unicode except the Chinese, Japanese, and Korean ranges in a one or two byte representation which can be used as an OS/2 DBCS codepage. This should not be used for interchange as it is non-standard.

OS/2 Warp Unicode Codepages Reference Table

Table 4. OS/2 Warp Unicode Codepages Reference Table

Codepage	Description	Base	PM	Unicode	Notes
1200	Unicode UCS-2		X	X	
1207	Unicode UPF-8		X	X	Not for interchange
1208	Unicode UTF-8		X	X	

Additional Converters

In addition to the supported codepages, OS/2 Warp provides some additional conversion tables that can be used with the ULS conversion functions. These codepages can be used only as Unicode converters. They are not available in OS/2 base or Presentation Manager. These codepages contain the Apple, Publishing, Printer, and APL codepages.

New Support in OS/2 Warp Server for e-business

OS/2 Warp Server for e-business adds new codepage support. Many of these changes are available in FixPaks for previous releases.

Unicode

Three Unicode codepages are supported (1200, 1207, and 1208).

Euro Codepages

The Euro sign has been added to a number of codepages. When possible, this character was added in a non-used position. When necessary, a character was removed from the codepage to make room for the Euro. In most cases, the removed character was the International Monetary Symbol. In codepage 850, the dotless-i was removed. In codepage 862 (Hebrew), both the Euro and Shequel were added.

Latin 9

Latin 9 is the new ISO-8859–15 character set. This is similar to ISO-8859–1 (Latin 1), but removes the fractions and several accent marks. It adds in support for oe, OE, scaron, Scaron, zcaron, Zcaron, Ydiereis, and Euro.

The following codepages represent the Latin 9 character set:

859 PC Latin 9

923 ISO Latin 9 (ISO-8859–15)

924 Latin 9 EBCDIC

Codepage 859 can be used as a base codepage with the US, French, Belgium, Canadian French, and Finnish country code and keyboard. However, many applications do not recognize this codepage.

Asian Codepages

A full set of Asian codepages is included in all versions of OS/2. This includes many DBCS codepages for Japan, China, Korea, and Taiwan. The component codepages are also supported.

Default Alias Table

The OS/2 Warp Unicode conversion logic allows a number of aliases for IBM codepage names. These aliases are contained in the file

`\language\codepage\ucstbl.1st`

on the boot drive. The first column is the alias, and the second column represents the IBM codepage where it is defined.

Notes:

1. All codepage names must be ASCII-7 alphanumeric.
2. Hyphens are ignored in both alias and actual name.
3. OS/2 searches this code table case independent.

Table 6. Default Alias Table

Locales and Codepages

Table 7 on page 36 shows which countries and codepages can be used together by locale. The primary codepage for a specified country is listed in the PC column. The alternate codepage is listed in the Alt column. Some of the countries do not have alternate codepages.

Many countries allow other codepages to be used in addition to the primary and alternate codepages. These additional codepages are not set by the installation process.

Countries that use Latin script can utilize codepage 1004, which has the same characters as the Latin Windows codepage. The codepage 850 can be specified for all countries but can cause unexpected results when used in languages that do not use the Latin script.

The Windows codepages cannot be used in the CODEPAGE command in CONFIG.SYS but are available for use with Presentation Manager.

Notes:

1. The codepage is not available in WIN-OS/2.
2. The actual characters are from the primary codepage, but the specified number is used.

Codepages

Notes:

1. The hexadecimal number for each character box shows the Unicode encoding of the character. If there is no Unicode value, the codepoint is unassigned.
2. A large X in a character box indicates that this is the starting byte of a two byte character.
3. Double byte character sets which are used for east Asian languages (Japanese, Chinese, and Korean) are formed from two base codepages, a single byte codepage, and a double byte codepage. The title gives the constituent codepage numbers.

Appendix. Notices

This information was developed for products and services offered in the U.S.A. IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing
IBM Corporation
North Castle Drive
Armonk, NY 10504-1785
U.S.A.

For license inquiries regarding double-byte (DBCS) information, contact the IBM Intellectual Property Department in your country or send inquiries, in writing, to:

IBM World Trade Asia Corporation Licensing
2-31 Roppongi 3-chome, Minato-ku
Tokyo 106, Japan

The following paragraph does not apply to the United Kingdom or any other country where such provisions are inconsistent with local law: INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the information. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this information at any time without notice.

Any references in this information to non-IBM Web sites are provided for convenience only and do not in any manner serve as an endorsement of those Web sites. The materials at those Web sites are not part of the materials for this IBM product and use of those Web sites is at your own risk.

Licensees of this program who wish to have information about it for the purpose of enabling: (i) the exchange of information between independently created programs and other programs (including this one) and (ii) the mutual use of the information which has been exchanged, should contact:

IBM Corporation
Department LZKS

89

11400 Burnet Road
Austin, TX 78758
U.S.A.

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this document and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement, or any equivalent agreement between us.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurement may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

All statements regarding IBM's future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only.

All IBM prices shown are IBM's suggested retail prices, are current and are subject to change without notice. Dealer prices may vary.
